

SURFACLEAN® 688
Neutral pickling

pH NEUTRAL
GENTLE
AND LABEL FREE

The chemistry is right here.
Beautiful surfaces.

SURFACLEAN® 688

SURFACLEAN 688, the gentlest way to remove layers of rust and scale from metal surfaces. The non-labelling of the product leads to safe handling when working.

Combined with our wetting agents and degreasing enhancers, SURFACLEAN 688 can be used as a combination of degreasing and pickling.

CHARACTERISTICS

- Removes oxide deposits and scale layers
- The make-up solution is pH neutral (6.0 - 7.0)
- Lable-free
- Can be used with our degreasing enhancers as a combination of degreasing and pickling
- Forms temporary corrosion protection
- Contains neither EDTA nor NTA

APPLICATION

- Steel and galvanized material
- Spray and immersion method (25 °C - 70 °C)
- Preparation concentration: 20 - 100 ml/l

pre-treatment-processes/](http://www.kiesow.co.uk/products/pre-treatment-processes/)

As an international group of companies, we have been developing, producing and selling polishing agents, polishing wheels and polishing rings, industrial cleaning products (degreasers), process baths for electrolytic metal deposition and post-treatment systems (passivations/TOP coats) for more than 100 years.

We also supply phosphatings for pre-treatment prior to powder coating. Furthermore, we are also known as a trading company for basic chemicals, anodes and accessories.

We are the only system supplier to offer processes from polishing to final coating (sealers). Our products stand for decorative, functional and sophisticated finishes.
